

Data Forensics

INTRODUCING DATA FORENSICS

Our evolving knowledge and technique which results from every day experience make us the perfect choice for all data forensics needs. We do not simply rely on someone's easily fooled forensic software to do the work for us. We break down data to the one's and zero's in order to find out the what's, why's, when's and how's.

IAC SecureTech specializes in providing forensic services for corporations as well as attorneys and we understand the needs of both. We are experts in the **science, art, and technology** of data forensics.

THE SCIENCE OF DATA FORENSICS

Our founder, President/CEO Aaron Hughes also serves as IAC SecureTech's lead investigator. Aaron is trained in correct evidentiary handling procedures, which includes the following:

- Correct Storage
- Replication
- Audit Trail Procedures
- Scientific Methodology

THE ART OF DATA FORENSICS

IAC SecureTech is engaged daily in the fight against cybercrime. We are constantly updated and at the edge of information security response simply because that's all we do. The breadth of our experience in intrusion response and analytics brings a unique ability to identify and gather evidence that others might overlook or contaminate. We are also equipped to counteract the different techniques commonly employed in attempts to cover up digital evidence.

Our reports are clear, concise, and are always supported with facts and other evidence from easily replicated and hard to refute supplemental information.

The breadth of our experience in intrusion response and analytics brings a unique ability to identify and gather evidence that others might overlook or contaminate. We are also equipped to counteract the different techniques commonly employed in attempts to cover up digital evidence.

THE TECHNOLOGY OF DATA FORENSICS

IAC SecureTech utilizes technology accepted and vetted by the industry. Our lab allows us to work safely on everything from malicious code to malicious employee hard drives.

We are also outfitted with mobile forensic technology and can extract forensic copies without cracking the computer case if need be.
